

Smartphone Mount

Take photos and videos from a robot's point of view!

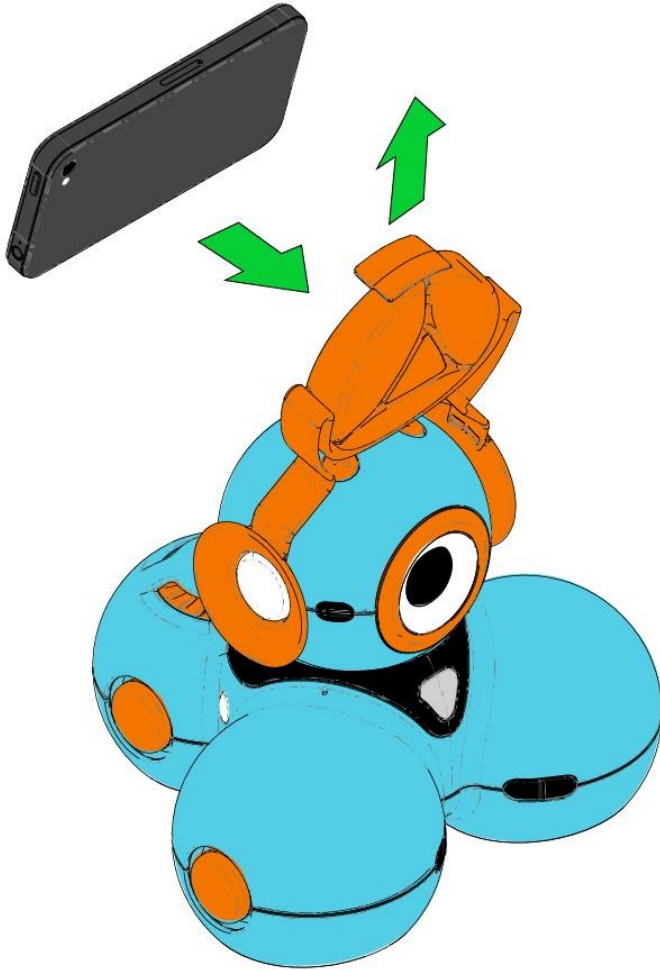

Step 1

Pull the connector rings of the smartphone mount outward and line them up around Dash's head.

Step 2

Snap the rings into place to connect smartphone mount to Dash's head. The mount can rotate and lock at 90 and 45 degrees (straight up and down, forward, backward, or diagonal), but we recommend keeping it upright to keep your smartphone balanced on top of Dash.

Step 3

Grab your smartphone, and adjust the mount so your phone fits snugly. The screen of your smartphone should be facing the back of the robot. Take a test photo to check your smartphone camera's position!

Step 4

Once your smartphone is firmly secured and positioned correctly within the mount, and then Dash is ready to roam!
